fact pdf - Definition.

Genetically modified foods are foods produced from organisms that have had changes introduced into their DNA using the methods of genetic engineering as opposed to traditional cross breeding. In the U.S., the Department of Agriculture (USDA) and the Food and Drug Administration (FDA) favor the use of the term genetic engineering over genetic modification as being more precise; the ... Genetically modified food - Wikipedia - Claim 2: Soybeans are high in phytic acid - a substance that can block the absorption of essential minerals - present in bran or hulls of all seeds. (Fallon/Enig 2000) Answer 2: The knowledge of proper preparation to transform beans and grain into food - including the removal of the hull - has been part of our collective humanity for over 10,000 years.
